How to solve a
2x2 Cube

How to Solve a 2x2 Cube

A 2x2 cube consists of 8 corner pieces, and no other types os cubies. The number of possible positions or the cube is 3.674.160.
The 2x2 cube is actually a regular 3x3 cube without the edges and the center pieces. So basically solving the 2x2 cube will be identical to solving only the corvers of 3x3. If you can solve a 3x3 cube, 2x2 is not a problem.
The maximum number of turns required to solve a 2x2 cube is up to 14 turns only.
Color scheme: On most cuber blue is opposite to green, red is opposite to orange and yellow is opposite to white.

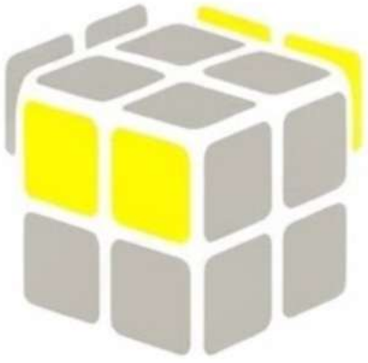

Step 1: Solve the Down Face

Chooose your favorite color as down face and match up all these colors (there are 4 pieces in this color), you just need to solve it same as the corner pieces of a 3x3 cube.

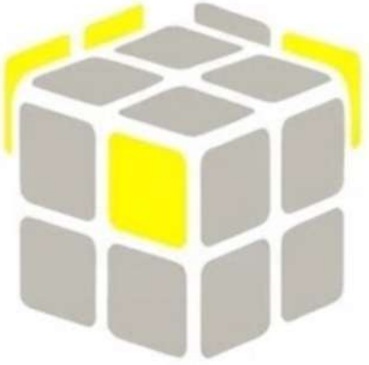

Step 2: OLL - Solve the Top Face

In this step you need to orient the color of the top face. The result should be that the opposite color to the bottom color will be completed. There are 7 cases.

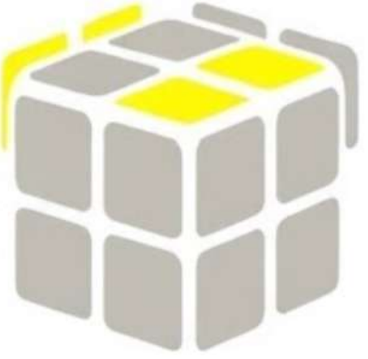

OLL1: R2 U2 R' U2 R2

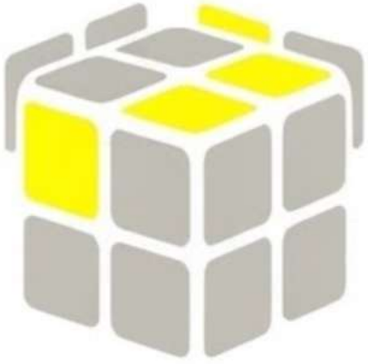

OLL2: F R U R' U' R U R' U' F'

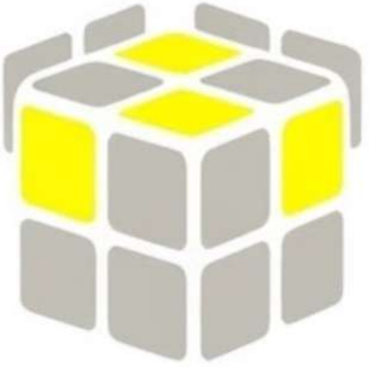

OLL3: F R U R' U' F'

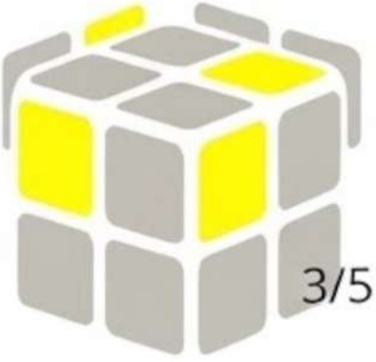

OLL4: R U R' U' R' F R F'

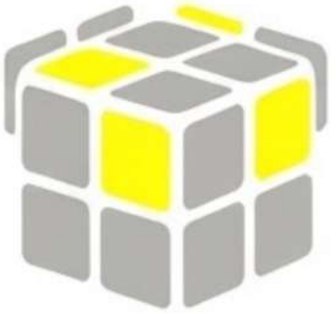

OLL5: F R' F' R U R U' R'

OLL6: R U R' U' R ' U' R'

OLL7:R U R' U R' U2 R'

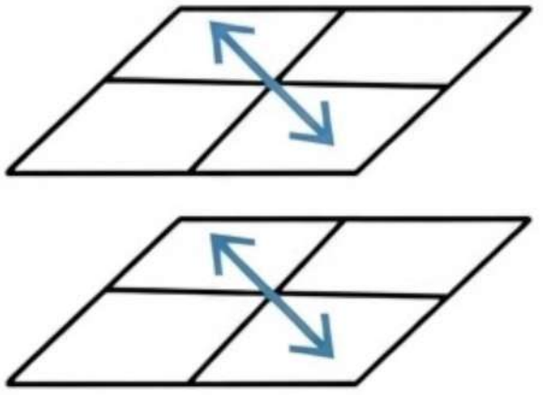

Step3: Permute remaining colors

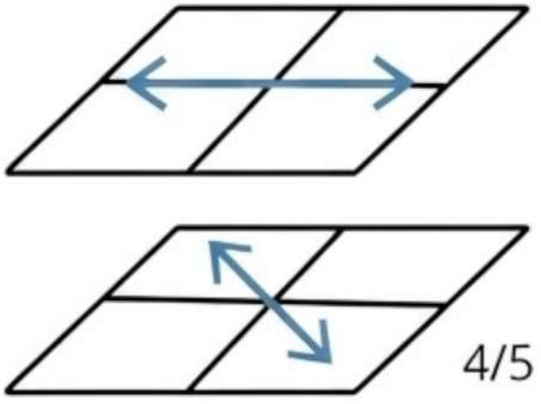

At last we need to match up all colors of the top and bottom layerrs, there are 5 cases.

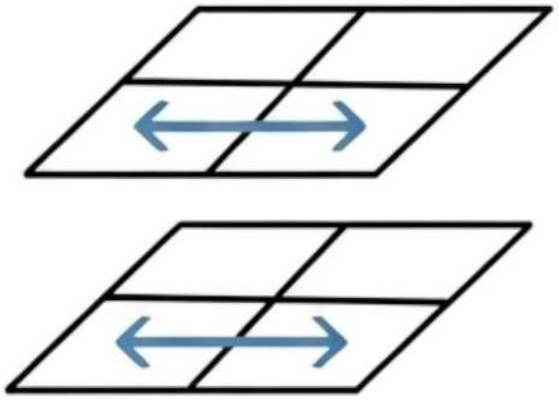

If the top layer and bottom layer are not solved, you need to learn these 3 algorithms.

Alg1:R2 B2 R2

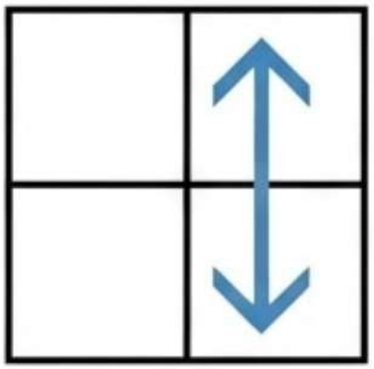

Alg2:R1 U R' B2 R U' R

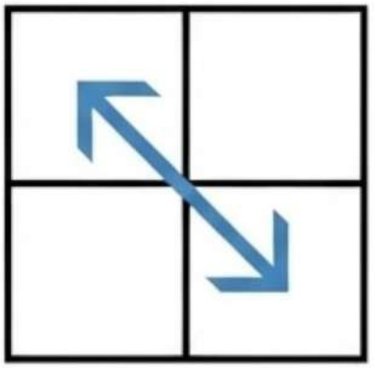

Alg3:R2 U' R2 U2 F2 U' R2

If one of the layers is already solved, to solve the last layer, you need to learn these 2 algorithms.

Alg4:R U2 R' U' R U2 L' U R' U' L

Alg5:R U' R' U' F2 U' R U R' U F2

Done! Congratulations! you have solved the cube, keep practicing these algorithms you will de able to solve the cube in 10 seconds.
